

ADVANCE METAL INDUSTRIES AUSTRALIA

AMIA windows are different!! **They are designed specifically for steel cladding**

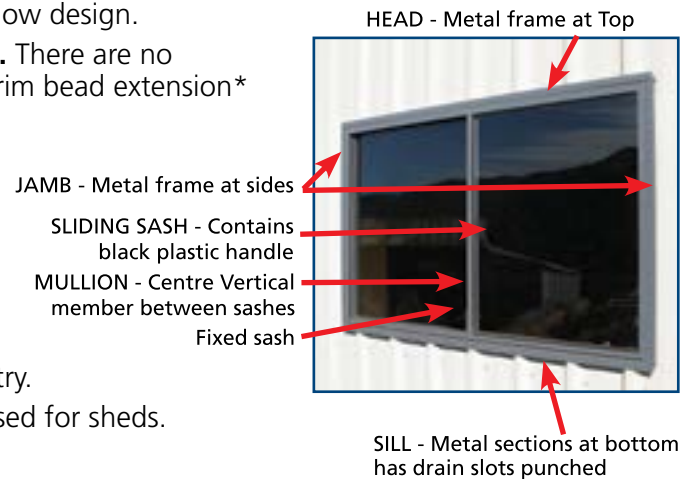

AMIA windows are worth looking into – **They are designed to a quality and offer value**

What benefits do AMIA shed windows offer?

- Combine the best features of fin fixed and face fixed window design.
- **The exterior has a trim bead to conceal fixing screws.** There are no fasteners visible externally when installed correctly and a trim bead extension* inserted down the jamb. (*trim bead extension is an option that can be ordered as an extra, it is not required on "corro" profiles.)
- Available in 20 colorbond® colours plus silver anodised finish.
- Available Australia wide.
- Packaged for national distribution.
- Australia's largest window supplier to the steel shed industry.
- Designed and sized for most common steel wall profiles used for sheds.
- 7 year warranty (conditions apply).
- Sashes are independent of frames making them more energy efficient and can be cheaper to re-glaze if a glass pane is broken.
- Window latches at the mullion for easy access rather than jambs that curtains may obscure.
- 16mm Ø rollers with tyres that do not form 'flat spots' and **stainless steel bearings** to ensure smooth and easy operation. Beware of windows that operate on plastic guides that often break and are difficult to open and close!
- Simple and fast to install, instructions provided with every window.
- Self flashing when correctly installed. **No need to provide any other metal flashings to trim or waterproof this window.**
- No ugly black PVC sill flap along the bottom to close off pans in the cladding. **Sill flaps were designed for brick and masonry sills, not steel cladding.**
- Engineered to meet or exceed all Australian wind regions. Ask your shed supplier or visit our website for full product options and engineering details.
- 5 standard widths available in our shed window range. These widths were sized to fit most common steel wall profiles used for Australian sheds.
- The only window that offers engineered internally fixed structural installation options. This system can also accept 'snap fitting' cut to size powder coated aluminium reveals and architraves, suitable for buildings being lined with plasterboard.
- The external trim bead can also be provided with double hung, awning windows and barn windows to match the sliding window.
- Tinted glazing and special energy efficient glasses are also available.
- Flyscreens are simple and fast to remove for cleaning and replace.

To get the best value remember to order your trim bead extensions, flyscreens, barrier screens or any vent locks with your initial order.

Security License no. 410315427

"We guarantee there is no better window for steel cladding!!"

"We have a vision: to be Australia's leading window supplier to the steel industry by providing best quality products and service."
